Criteria for classification:

If the prefix "D" or suffix "R" or "Y" is included in the classification, this indicates that the results should be treated with caution. An explanation of the reason for prefix and suffixes is given in Appendix 2

Appendix 1 Classification of spread of flame

Classification	Spread of flame at 1.5 min		Final spread of flame		
	Limit (mm)	Limit for one specimen in sample(mm)	Limit (mm)	Limit for one specimer in sample(mm)	
Class 1	165	165+25	165	165+25	
Class 2	215	215+25	455	455+25	
Class 3	265	265+25	710	710+25	
Class 4	as si	Exceeding the	e limits for clas	ss 35 cG 50	

Appendix 2 Explanation of prefix and suffixes which may be added to the classification

- A suffix R is added to the classification if more than six specimens are required in order to obtain six valid test results (e.g. class 2R).
- A prefix D is added to the classification of any product which does not conform to the surface characteristics specified in the standard and has therefore been tested in a modified form (e.g. class D3).
- 3. A suffix Y shall be added to the classification if any softening and/or other behaviour that may affect the flame spread occurs.

<u>Classification</u>: In accordance with the class definitions given in BS 476 Part 7:1997+AC: 2014, the tested sample is classified as <u>Class 1</u>.

Statements:

The test results relate to the behaviour of the test specimens of a product under the particular conditions of the test. They are not intended to be the sole criterion for assessing the potential fire hazard of the product in use.

The test results relate only to the specimens of the product in the form in which were tested. Small differences in the composition or thickness of the product may significantly affect the performance during the test and may therefore invalidate the test results. Care should be taken to ensure that any product, which is supplied or used, is fully represented by the specimens, which were tested.
